Queens Road Small Cap Value Fund

September 30, 2018

Small Companies	A Value Philosophy	Four-Step Process
The Queens Road Small Cap Value Fund uses fundamental, bottom-up analysis to construct a diversified portfolio of small-capitalization companies. ¹	Our research process is built on the principles established by Benjamin Graham to identify companies that are trading at a discount to their intrinsic value.	Quantitative & Qualitative Analysis 1. Balance sheet 2. Valuation 3. Management 4. Sector and Industry

Performance Summary: September 30, 2018

Gross Annual Operating Expenses: 1.18%

*Performance annualized. Fund inception June 2002.

Important Performance and Expense Information

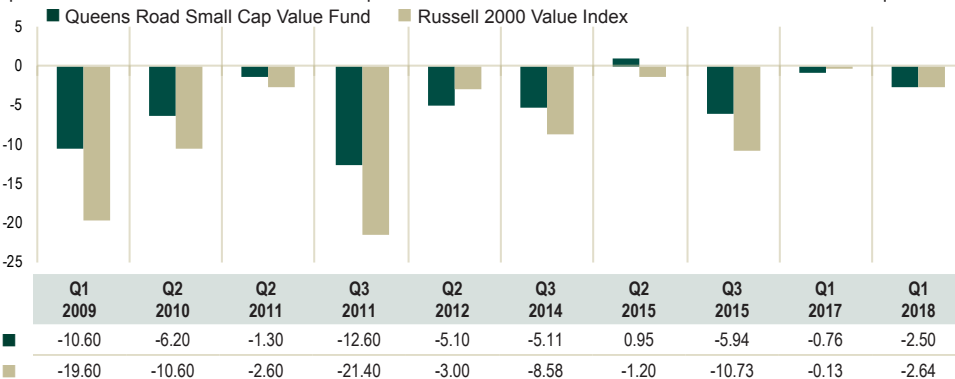

All performance information reflects past performance, is presented on a total return basis and reflects the reinvestment of distributions. Past performance is no guarantee of future results. Current performance may be higher or lower than performance quoted. Returns as of the recent month-end may be obtained by calling (888) 353-0261.

Investment return and principal value will fluctuate, so that shares may be worth more or less than their original cost when redeemed. There can be no assurance that the fund will meet any of its objectives.

From inception to 12/31/2004 the Fund's manager and its affiliates voluntarily absorbed certain expenses of the fund and voluntarily waived its management fee. Had the Fund's manager not done this, returns would have been lower during that period. The Fund's manager and its affiliates do not intend to absorb any expenses or waive its management fee in the future.

Down Market Performance Comparison (%)

The Russell 2000 Value Index recorded ten down-market quarters since Q1 2009. The chart below compares the performance of the Queens Road Small Cap Value Fund to that of the Russell 2000 Value Index in those quarters.

09/30/2008 to 09/30/2018; Source: Morningstar

1 The Queens Road Small Cap Value Fund primarily invests in securities of small-capitalization companies, defined as those with market capitalization less than the largest company in the Russell 2000 Value Index. Investing in small companies involves special risks including, but not limited to, the following: smaller companies typically have more risk and their company stock prices are more volatile than that of large companies; their securities may be less liquid and may be thinly traded which makes it more difficult to dispose of them at prevailing market prices; these companies may be more adversely affected by poor economic or market conditions; they may have limited product lines, limited access to financial resources, and may be dependent on a limited management group; and small cap stocks may fluctuate independently of large cap stocks. All investment decisions are made at the discretion of the Portfolio Manager, in accordance with the then current Prospectus.

Bragg Financial Advisors, Inc. is a Registered Investment Firm offering securities through an affiliate, Queens Road Securities, LLC, Member FINRA/SIPC. Bragg Financial Advisors, Inc. is the investment adviser for the Queens Road Small Cap Value Fund. Queens Road Securities, LLC is the distributor of the Queens Road Small Cap Value Fund and an affiliate of Bragg Financial Advisors, Inc.

The **Russell 2000 Value Index** is a subset of the Russell 2000 Index, which tracks the stocks of small domestic companies, based on total market capitalization. The Russell 2000 Value Index represents those stocks of the Russell 2000 with lower price-to-book ratios and lower relative forecasted growth rates. You cannot invest directly in these indexes.

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

Morningstar Risk/Reward graph plots the return and risk (measured by standard deviation) for a selection of securities and a benchmark index for the trailing period identified in the report. The table beneath the graph identifies the specific risk and return plot points for the graphed securities and the benchmark index. The returns noted for a security reflect any sales charges that were applied in the illustration over the time period selected, but do not reflect impacts of taxation. If impacts of taxation were reflected, the returns would be lower than those indicated in the report. The return plotted in the graph is mean geometric return. Standard deviation is a statistical measure of the volatility of the security's or portfolio's returns in relation to the mean return. The larger the standard deviation, the greater the volatility of return in relation to the mean return.

For each fund with at least a three-year history, Morningstar calculates a Morningstar Rating™ based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a fund's monthly performance (including the effects of sales charges, loads, and redemption fees), placing more emphasis on downward variations and rewarding consistent performance. The top 10% of funds in each category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars and the bottom 10% receive 1 star. (Each share class is counted as a fraction of one fund within this scale and rated separately, which may cause slight variations in the distribution percentages.) The Overall Morningstar Rating™ for a fund is derived from a weighted average of the performance figures associated with its three-, five- and 10-year (if applicable) Morningstar Rating metrics. Past performance is no guarantee of future results.

Morningstar Return Rating is an annualized measure of a fund's load-adjusted excess return relative to the return of the 90-day Treasury Bill over a three-, five-, or ten-year period. This is a component of the Morningstar Risk-Adjusted Return. This is derived directly from Morningstar Return. In each Morningstar Category, the top 10% of investments earn a High rating, the next 22.5% Above Average, the middle 35% Average, the next 22.5% Below Average, and the bottom 10% Low. Investments with less than three years of performance history are not rated.

Morningstar Risk Rating is a proprietary Morningstar data point. An assessment of the variations in a fund's monthly returns, with an emphasis on downside variations, in comparison to similar funds. In each Morningstar Category, the 10% of funds with the lowest measured risk are described as Low Risk, the next 22.5% Below Average, the middle 35% Average, the next 22.5% Above Average, and the top 10% High. Morningstar Risk is measured for up to three time periods (three, five, and 10 years). These separate measures are then weighted and averaged to produce an overall measure for the fund. Funds with less than three years of performance history are not rated.
